Matyáš PŘIBYL

AI-first builder · data tools, automations and apps with Claude Code

Location: Prague, Czech Republic
E-mail: matyaspribyll@seznam.cz
Portfolio: matyas-pribyl-portfolio.up.railway.app
CV: Czech version (PDF)

Profile

I build AI-first. With Claude Code I build data tools, automations and apps that run in production for real clients: a print shop, a car detailing business, a jewellery brand and construction companies. I work to a fixed process (specification, risk analysis, plan, build, automated tests) and every output is checked by a different step than the one that produced it. I have a secondary school diploma in IT (SPŠE Ječná) and almost five years in international freight forwarding, where I run shipments from the order through agents, carriers and customers to invoicing.

Data and AI projects

Happy to walk you through any of them live, including the code. More details and links are in my portfolio.

- **Property sales research (client work)** – Python collects sales and listings from several sources (a property price database, listing portals, archived listings from the Wayback Machine, OpenStreetMap), unifies them into one dataset and generates the report and an Excel workbook. Every number is calculated, none is typed by hand, and a separate agent checks the report independently.
- **Construction schedules and cost analyses (paid client work)** – Python turns the client's brief into an Excel workbook with formulas and a print-ready PDF, then recalculates every date independently and compares both versions. Cost analyses combine property price data from several sources with construction costs. The whole process is written down as a reusable skill, and new jobs keep coming in.
- **AI agent writing posts for a print shop** – runs non-stop on Railway. Every Sunday it finds topics, drafts posts and saves them to Notion, where a person approves them. Every number must have a source in a bank of verified facts. TypeScript, Notion API, 593 automated tests.
- **Ťuk: a home log you tap with your phone** – NFC stickers and an iPhone Shortcut write to a shared household log. Supabase (Postgres with row-level security, pg_cron, Edge Functions), a PWA, Docker on Railway, 33 documented risks and 91 automated tests.
- **Social media data for a print shop** – an analysis of 300 of its posts from 2018 to 2026 (Apify and Python) showed that photo posts perform better than pure graphics, and the new content plan is built on it.
- **SVAČINA (Summer Coding Challenge 2026, profiq)** – a brief from which an AI agent built a game on its own in a single run, with no human intervention. 25 test runs and 17 versions of the brief.

Work experience

08/2025 – present — **International logistics company, Prague**
Freight forwarder / dispatcher

- Running shipments end to end: B/L approval, communication with agents and customers, invoicing
- Daily operations with many non-standard cases and problem solving under pressure
- Coordinating agents and carriers abroad, communication in English

11/2021 – 07/2025 — **Freight forwarding company, Prague**
Freight forwarder / dispatcher, sea and rail transport

- End-to-end order handling (import/export, FCL/LCL) from booking to delivery
- Direct communication with customers and business partners
- Coordinating and improving transport processes
- Working with the internal system for shipment records

Education and courses

2017 – 2021	**Secondary Technical School of Electrical Engineering Ječná, Prague** Information technology, school-leaving exam (maturita)
08/2026	**Superpower Vibe Coding Summer** – Aibility, certificate Building reports, websites and apps with AI, a personal “second brain”
from 10/2026	**Future AI Leader 2026** – Filip Dřímalka Working with AI agents and adopting AI in companies (October 2026 – January 2027)
Oracle Academy	**Artificial Intelligence and Machine Learning** – certificate **Java Programming** – certificate

Skills

AI	Claude Code (daily), connecting services through MCP, AI agents and automations, prompts and skills, independent review of AI output
Data	Python (pandas, NumPy, openpyxl), SQL (Postgres in Supabase), collecting data from APIs and websites. Written AI-first: I design and verify the solution, Claude Code writes the code
Platforms	Railway, Supabase, Docker, scheduled jobs (cron), Notion API
Tools	Excel and MS Office, Notion, Blender, DaVinci Resolve
Languages	Czech – native; English – B2, daily in written work communication, spoken several times a month
Other	driving licence (B)

Interests

AI and new technology · food · sport (fitness, basketball, swimming) · travel
